The application has been amended as follows:

In the claims

4. *(Currently Amended)* An automatic refresh request generation system for a data backup system, the system comprising:  
a computer network with data backup activity performed by a plurality of data backup products wherein each data backup product generates records relating to the data backup activity;  
and  
a host computer connected to the computer network that executes a canonical backup device, wherein the canonical backup device ~~further comprising a backup engine plug-in that~~ will obtains records of data backup activity from each data backup product and a refresh request unit that operates in the background of the host computer, wherein the refresh request unit ~~further~~

comprising a timer that determines if the hour of the current day has changed, means for checking an automatic request determiner to determine if a refresh request for the particular server is automatically initiated and means for initiating a refresh request if the refresh request has been initiated.

5. *(Currently Amended)* A system for inserting records from one or more data backup products into a canonical database, comprising:

a computer network with data backup activity performed by a plurality of data backup products wherein each data backup product generates records relating to the data backup activity; and

a host computer, having a processor and a memory, connected to the computer network that executes a canonical backup device, wherein the canonical backup device ~~further~~ comprising a backup engine plug-in ~~that will~~ obtains records of data backup activity from each data backup product and a database insertion unit that inserts the data from each record of a data backup product into a canonical database, wherein the database insertion unit ~~further~~ comprising means for inserting data from the record into a data backup portion, means for inserting data from the record into a backup client portion, means for inserting data from the record into a backup target portion, means for inserting data from the record into a backup device name portion and means for inserting data from the record into a backup level portion.

6. (*Currently Amended*) A method for inserting records from one or more data backup products into a canonical database, each data backup product connected to a computer network and each data backup product generating records relating to the data backup activity for the data backup product, the method comprising:

obtaining records of data backup activity from each data backup product; and

inserting the data from each record of a data backup product into a canonical database and a database insertion, wherein the database insertion further comprising inserting data from the record into a data backup portion, inserting data from the record into a backup client portion, inserting data from the record into a backup target portion, inserting data from the record into a backup device name portion and inserting data from the record into a backup level portion.

3. After further review the invention as claimed and search a variety of databases, the examiner submits that claims 4-6 are allowable in light of the prior art of record, in light of the terminal disclaimer and in light of the arguments made of record.
